

Driving shared knowledge and benefits from a global and open digital construction sector

17th March 2021

www.GlobalBIMSummit.org

About the Global BIM Summit

Building on a foundation of successful collaborations between governments, and regional public sector communities, **we are taking the next step together to form a Global BIM Network for the public sector.**

To launch the Global Network, we are hosting a Global BIM Summit online on 17th March 2021.

The Global BIM Summit will bring together **public sector** representatives and investors to discuss the national and regional **Building Information Modelling** (BIM) initiatives that are accelerating the **digital transformation** of the sector. We will discuss the opportunity that digitalization presents for governments and industry; and how we can collaborate as a **Global BIM Network** to foster **inclusive growth** and drive **shared benefits** from an **open digital construction sector**.

Sessions include:

- The global view of the construction sector and the role of BIM and digital in infrastructure delivery
- What are the opportunities and challenges faced by national digital programs?
- How can the global public sector collaborate and work together with industry to address these barriers?
- Launch of the Global BIM Network for the public sector.
